

INNOVATION IS MOVING CANCER TREATMENT LIGHT YEARS AHEAD.
10 MILLISECONDS AT A TIME.

Varian TrueBeam™
Image-Guided Radiotherapy and Radiosurgery Platform
Built on the VxWorks operating environment

Committed to saving hundreds of thousands of lives a year, the innovators at Varian refuse to think small. That's why they chose Wind River to provide the operating environment for their leading-edge TrueBeam™ radiotherapy and radiosurgery system. Building upon the reliable performance of our VxWorks platform, the Varian team created a system that is literally redefining cancer treatment—one capable of performing accuracy checks once every 10 milliseconds, and continuously monitoring more than 100,000 distinct data points throughout the entire treatment process.

Because in the fight against cancer, no detail is too small. And no effort too great.

Please visit www.windriver.com/customers to learn more about how Wind River customers have transformed their devices.
